

Material Symbols

Exception0x0194

August 2024

1 Introduction

The `material-symbols` package provides a straightforward way to incorporate [Google's Material Symbols](#) into \LaTeX documents. This package offers access to a broad array of icons in various styles, enhancing the visual elements of your documentation.

2 Usage

Access symbols via a standardized command: `\mSymbol{name}`, where `name` refers to the symbol's name in [Google Fonts](#), formatted in `kebab-case`.

For example, `\mSymbol{sports-soccer}` renders .

These commands can be employed anywhere in your \LaTeX documents to insert icons at desired locations.

2.1 Styles

Material Symbols are available in three styles: **Outlined**, **Round**, and **Sharp**. The default style is **Outlined**, but you can specify an alternative style using an optional argument:

- `\mSymbol[outlined]{star-rate}` (or `\mSymbol{star-rate}`) displays the icon's outlined version: .
- `\mSymbol[rounded]{star-rate}` displays the icon's rounded version: .
- `\mSymbol[sharp]{star-rate}` displays the icon's sharp version: .

3 List of Icons

Below is a table listing all available symbols in this package, complete with previews of the icons in their different styles, the corresponding commands, and their codepoints. For a more user-friendly search, visit [Google Fonts](#).

Outlined	Rounded	Sharp	Command	Codepoint
